The print is small, and the print quality varies from page to page. Order the bound books. Larger, consistent print. Less eye fatigue.With that said, these books will CHANGE your life paradigm. If you are prepared to accept that everything you have been told to believe MAY NOT be the whole truth, and that the answers to the questions about creation as explained by Sitchin actually do make ALOT of sense in light of what we now know about our ancient ancestors...then be prepared to have your mind blown. We haven't even begun to grasp the potential of our own divine creation, and his books will open your "eye" to the present current change in the human dynamic and the shift in our cosmic consciousness. This has been going on all around us for decades, and once you're aware of it, you'll never see things the same again. I can't read these fast enough!! We have so much catching up to do!1 of 1 people found the following review helpful. Sitchin was a one-of-a-kind visionaryBy ChewyEvery book in the Earth Chronicles series is a delight to read. You may not agree with all of Sitchin's theories regarding Nibiru and the Anunnaki, but his chronology of ancient history and global events is spot-on, and his understanding of Sumerian mythology and language is impeccable. Regardless of the personal conclusions

you arrive at after reading his work, I can certainly guarantee that you will also come away with a much greater sense of possibility for our ancient past, and the realization that there is much, much more to our history than we've ever been led to believe. In my opinion, it is the great work of researchers like Zecharia Sitchin and others that will ultimately bridge the gap between evolution and creationism, and finally reveal to us the long-hidden truths about our celestial origins.¹ of 1 people found the following review helpful. a disturbing readBy Glyn ThomasThe conventional academic and religious orthodox understanding of history leaves many questions unanswered. Sitchin's analysis is generally sober and backed with numerous cross references. One troubling aspect of life today is the way the internet is dissembling information and fragmenting orthodox knowledge - as humanity moves thru time the common knowledge base will become increasingly fragmented. Zealots shout into cyberspace - truth is at risk of drowning, but the ancient recorded writings of the Sumerians, Jews and others appear to offer truths that conventional history has yet to embrace. A thoroughly disturbing insight to the fragile state of conventional history today.

Was Adam the first test-tube baby? Did nuclear fission destroy Sodom and Gomorrah? How were the ancients able to accurately describe details about our solar system that are only now being revealed by deep space probes? The awesome answers are all here, in this important companion volume to The Earth Chronicles series. Having presented evidence of an additional planet as well as voluminous information about the other planets in our solar system, Zecharia Sitchin now shows how the discoveries of modern astrophysics, astronomy, and genetics exactly parallel what has already been revealed in ancient texts regarding the "mysteries" of alchemy and the creation of life. Genesis Revisited is a mind-boggling revelation sure to overturn current theories about the origins of humankind and the solar system.

"Sitchin is a zealous investigator into man's origins . . . a dazzling performance." (Kirkus s) . . . a mind-boggling revelation sure to overturn current theories about the origins of humankind and the solar system." (Suzette, reviewer, sci-encebooksarchaeology.blogspot.com, Dec 2008)"Exciting . . . credible . . . most provocative and compelling." (Library Journal)"Sitchin's works are outstandingly different from all others that present this central theme. His linguistic skills in the languages of antiquity and his pursuit of the earliest available texts and artifacts make possible the wealth of photographs and line drawings appearing in his books from tablets, monuments, murals, pottery, and seals." (Rosemary Decker, historian and researcher)From the Inside FlapScience and Myth Are they one and the same? Has a prehistoric space base on Mars been reactivated? Was Adam the first test-tube baby? And was Eve the original beneficiary of organ transplant surgery? Did nuclear weapons destroy Sodom and Gomorrah? Did computer printouts exist 5,000 years ago? How were the ancients able to accurately describe details about our solar system that are only now being revealed by space probes? Is humankind, in catching up with ancient knowledge, also repeating ancient incidents as that of the Tower of Babel? The awesome answers are all here, fully documented with the latest scientific findings, in this important companion volume to The Earth Chronicles series. Having presented evidence of an additional planet as well as voluminous information about the other planets in our solar system, Zecharia Sitchin now shows how the discoveries of modern astrophysics, astronomy, and genetics exactly parallel what has already been revealed in ancient Sumerian, Egyptian, and biblical texts regarding the enigmas of the heavens, Earth, and the creation of life. Genesis Revisited is a mind-boggling revelation sure to overturn current theories about the origins of humankind and the solar system. Zecharia Sitchin was born in Russia and grew up in Palestine, where he acquired a profound knowledge of modern and ancient Hebrew, other Semitic and European languages, the Old Testament, and the history and archaeology of the Near East. He is distinguished by his ability to translate and interpret ancient Sumerian and other ancient texts. A graduate of the University of London with a degree in economic history, he worked as a journalist and editor for many years prior to undertaking his lifes work--The Earth Chronicles. He now lives and writes in New York City.From the Back CoverARCHAEOLOGY / HISTORY A Companion volume to The Earth Chronicles series. Special large-format edition, lavishly illustrated with maps, diagrams, and photographs In Genesis Revisited, author Zecharia Sitchin asks, Is it possible that Mankind has come out of the Dark Ages and the Middle Ages, reached the Age of Enlightenment, experienced the Industrial Revolution, and entered the era of high-tech, genetic engineering and space flight--only to catch up with ancient knowledge? Sitchin believes that the Book of Genesis and key Sumerian and ancient Egyptian sources reflect the highest levels of scientific knowledge, and he posits that what we are discovering today about Earth and the heavens is, in fact, a rediscovery of what had been known to a much earlier civilization. Genesis Revisited goes beyond the mere scientific curiosity; it delves into the core of humankind's existence, origin, and destiny. It is a revelation about where we are going because it reveals where we have come from.
