SatzThis work is remarkable in the depth of research conducted by Dr. Moller, a medical scientist with a side interest in archeology, scuba diving, photography, and the Bible. Moller's scientific hypothesis is that Exodus is a travel log written by Moses. Moller visited all the sites discussed in Genesis, as well as Exodus, and was able to identify the

locations of many ancient events. Ur is actually Urfa and is located in Turkey, rather than Iraq or Sumer. The crossing point for the Exodus was at the Gulf of Aqaba, not the Gulf of Suez or some lake. Midian is to the east of Aqaba, and that's where Moses was a shepherd for 40 years before taking the Israelites out of Egypt--back to Midian. Mount Sinai is in Midian, not in the Sinai Peninsula. Moller has collected numerous ancient maps and has shown how all the events and locations are correlated with the biblical text. Amenhotep III was the pharaoh during the Exodus; his son, Tut, died in the last plague. So Moller dates the Exodus to 1446 BCE. (Note: Moller uses BC and AD, when he should, as a scholar, use BCE and CE, but that's a minor nitpick.) Moller also shows that Joseph can be identified as Imhotep, and Moses can be identified as Senmut, an Egyptian general! All in all, this work is an extraordinary read, and I can heartily recommend this to everyone!

By chayah  
Reviewing the Kindle edition. I use Kindle for PC and was about to return the book after a few minutes. Many reviews are raving about the photographs. Likely those people have the printed edition because in Kindle for PC the pictures are extremely small and totally useless. Luckily I tried on Amazon cloudreader and with selecting a tiny font size and then zooming in a lot the pictures were big and good. This trick doesn't work with the Kindle app. No raving review from me about the pictures because they can be grouped as follows. 60% are page fillers without any real use. 40% are useful. Well could be useful.... Some pictures/diagrams are good and useful. But most maps aren't because things are missing from them. Example the text discusses where Abraham and his ancestors originated from. The included map includes a few red and green dots. No explanation what red or green means. And no placenames next to the dots. Because that's far from rare the numbers are: Only 20% of all pictures/maps/diagrams in this book are of any use. While the book presents interesting material a large part isn't Exodus related at all. It's still interesting stuff but I disagree with the author the information is required for understanding the part that's really about the Exodus. That makes it very hard for me to rate this book? Should I rate just what's in it or should I rate what I bought the book for? As said the book contains interesting views. The author starts his book with explaining he's a scientist and will take a scientific approach. Well he doesn't. Far from it. Yeah he includes some quotes and mentions some publications, but he \*fails\* to really explain why he concludes something. As an example, it's no secret that it's highly debated who the Exodus pharaoh was. So many different views. All based on the same reference works. What's really missing is that the author explains what's wrong about the other views. Or why he concludes some things.

By J. L. Johnson  
Very good at explaining some controversial points of view and sometimes showing more than one interpretation of archaeological findings. It is a thoughtful challenge of established thought on such things as where the Israelites crossed the Red Sea and where Mt. Sinai is located. I gave it four stars because some of the ideas in the book are a stretch. There were two historical individuals mentioned in Egyptian history that could have been Joseph but this book forwards only one. There are also two or three individuals in Egyptian history that could have been Moses too, one is more favorably presented than the others. Otherwise a scholarly presentation and well worth the read.

Learn new archeological discoveries and evidence of Exodus as an historical event. This book is an excellent Exodus Commentary filled with new facts and evidence. The Patterns of Evidence are exciting and interesting. This book is full of new facts and evidence, see proof of Exodus. This book goes beyond Exodus, Gods and Kings as well as The Exodus Code and The Patterns of Evidence. Understand the location of The Exodus, Gods and Kings, Pharaoh and Moses conflict. This exciting new book supports the Biblical story of the Exodus. Use with an Exodus Commentary or as an Exodus Bible Study. The Book of Exodus will come alive and very real. The Exodus Case reveals the discoveries of a team of scientists and researchers who travel in the footsteps of Moses and the Israelites on their journey from Egypt to Canaan. Learn new facts that strongly support the Book of Exodus. Is the real Mount Sinai, 'Horeb', located in today's Saudi Arabia? Where did Moses lead the people of Israel through the Red Sea? Where was UR located? Is there a place where burning sulphur has fallen? Does Mount Sinai have a lot of water in the middle of the desert? Is Joseph in Egyptian history? What about Moses' role in Egyptian history? What was the route of Exodus? This new 3rd edition has 133 new pages, 12 new tables and more than 230 new images and figures. In total, there are more than 790 color illustrations on the 448 pages. More than more than 790 color illustrations and photos help you get good answers to these questions and much more in The Exodus Case. This is the third edition of the Exodus Case, with 133 new pages, 12 new tables and more than 230 new images and figures. In total, there are more than 790 color illustrations on the 448 pages. Excellent for Sunday School and Home School study.

This is one of the most interesting fact-filled books that I have ever read. Once I started reading The Exodus Case, I could not put it down. This is truly a fresh and exciting study of the Exodus. I recommend it for Sunday School, Bible Study, Youth Department Study, Home School Study, as well as personal enrichment. This new 3rd edition has 133 new pages, 12 new tables and more than 230 new images and figures. In total, there are more than 790 color illustrations on the 448 pages. --Don Greve, Pastor Emeritus, St Marks Church Retired Bible Study Fellowship Teaching Leader, Sunday School Teacher  
About the Author  
Dr. Lennart Moller is a professor of medical sciences in Stockholm, Sweden. He has authored and edited several books on science and religion. Dr. Miller, is a research

scientist in the field of medicine and DNA-research from Sweden. He has studied a number of subjects (limnology, marine biology, toxicology, chemistry) at the Universities of Uppsala and Stockholm and has a Doctor s Degree in medicine from the Karolinska Institutet (KI). He is now a professor and head of the Research Laboratory of Analytical Toxicology at KI - medical university of Stockholm that decides about the Nobel Prize in Medicine. In addition to his work as a scientist and the publishing of scientific articles, Dr. Mller has published a number of books related to theology, ethics, cancer, urban air, environmental medicine, archaeology and scientific images.
